NC Smart Fleet Initiative is supported in part through the Clean Fuels Advanced Technology project with funding from the NC Department of Transportation.

Smart Fleet Qualification Levels

NCSC (and partners) will provide fleets with technical guidance and networking opportunities to assist them in achieving one of the following three levels:

**Supporter**

- Demonstrate a commitment to fleet efficiency, fuel diversity and conservation.
  - Open to all fleets that agree to track fuel use and implement activities that will result in reduced emissions.
  - No previous documented alternative fuel or fuel use savings required.
  - NCSC (and partners) will provide fleets with technical guidance and networking opportunities.

**Leader**

- Demonstrate a reduction in petroleum fuel use over the baseline year.
  - Initial application establishes baseline annual fuel use
  - Requires a minimum of two consecutive years of fuel use tracking to be eligible and a reduction in petroleum fuel use from baseline year through the use of alternative fuels and/or fuel conservation strategies.

**Champion**

- Demonstrate a reduction in petroleum fuel use over the previous two years.
  - Initial application establishes baseline annual fuel use
  - Requires a minimum of three consecutive years of fuel use tracking to be eligible and a reduction in petroleum fuel use in two consecutive year’s fuel use year through the use of alternative fuels and/or fuel conservation strategies.
  - Complete additional Clean Transportation Activities in all three categories:
    - Education, Outreach, and Promotion
    - Policy, Planning and Programs
    - Referrals
